

# SEO Fix Guide

https://drgargis.com/blog/hydrfacial-process/  
Audit #792 · 2026-06-17 10:30 · Overall 82/100

Total issues: 20 · High: 4 · Medium: 14 · Low: 2

## High (4)

High

Page speed

Priority 83/100

Medium (~45m)

### Largest Contentful Paint

Poor: 8.4s.

**Generic best practice**

Largest Contentful Paint should load within 2.5s. Optimise the largest above-the-fold element: compress hero images, preload critical assets, and eliminate render-blocking resources.

**Code fix**

Before:

```

```

After:

```
<link rel="preload" as="image" href="hero.webp">

```

High

Page speed

Priority 78/100

Easy (~15m)

### Cumulative Layout Shift

Poor: 0.528.

**Generic best practice**

Cumulative Layout Shift should be under 0.1. Set explicit width/height on images, reserve space for embeds and ads, and avoid late-loading fonts that re-flow text.

**Code fix**

Before:

```

```

After:

```

```

High

Page speed

Priority 74/100

Medium (~45m)

### PageSpeed performance score

Score 15/100 — poor.

**Generic best practice**

Open Lighthouse in Chrome DevTools or PageSpeed Insights — the report lists specific opportunities ranked by impact.

High

Page speed

Priority 74/100

Medium (~45m)

### First Contentful Paint

Poor: 3.63s.

**Generic best practice**

First Contentful Paint should be under 1.8s. Inline critical CSS, defer non-critical CSS/JS, and use a CDN.

## Medium (14)

Medium Images Priority 63/100 Easy (~15m)

### Images have dimensions

8/10 images have explicit dimensions.

#### Location

Line **519** · `div.elementor-column > div.elementor-widget-wrap > div.elementor-element > div.elementor-widget-container > a > img.attachment-full`

```
518             <a href="https://drgargis.com/">
> 519             
```

#### Generic best practice

Set explicit width/height on every `<img>` to prevent Cumulative Layout Shift. Browser reserves the box before the image loads.

#### Code fix

Before:

```

```

After:

```

```

Medium Content Priority 62/100 Medium (~45m)

### E-E-A-T: Expertise

Moderate:

#### Generic best practice

Show expertise: author bio with credentials, citations to reputable sources, in-depth coverage of the topic, technical accuracy.

Medium Content Priority 62/100 Medium (~45m)

### E-E-A-T: Trustworthiness

Moderate:

#### Generic best practice

Add trust signals: clear contact info, privacy policy, terms of service, customer reviews, security badges, real photos of team/location.

Medium Page speed Priority 59/100 Easy (~15m)

### Compression enabled

No gzip/brotli content-encoding header.

#### Generic best practice

Enable gzip or Brotli compression on your server. Typically cuts text payload by 70-80% — easy LCP win.

Medium Content Priority 58/100 Hard (~120m)

### E-E-A-T: Experience

Moderate:

#### Generic best practice

Demonstrate first-hand experience: original photos, personal anecdotes, before/after results, screenshots from the actual product/service.

Medium Content Priority 58/100 Hard (~120m)

## E-E-A-T: Authoritativeness

Moderate:

### Generic best practice

Build authoritativeness: links from respected sites in your niche, mentions in industry publications, About page detailing your expertise.

Medium Headings Priority 54/100 Easy (~15m)

## Single H1 tag

Found 2 H1 tags — best practice is exactly one.

### Location

Line 676 · #header-wrapper > section.main-title-section-wrapper > div.main-title-section-container > div.container  
> div.main-title-section:nth-of-type(2) > h1

```
675         <div class="container">
> 676             <div class="breadcrumb"><a href="https://drgargis.com/">Home</a><span class="breadcrumb-
default-delimiter"></span><a href="https://drgargis.com/blog/category/treatment/">Treatment</a><span
class="breadcrumb-default-delimiter"></...
677             </div>
```

### Generic best practice

Use exactly one <h1> per page. Multiple H1s confuse search engines about the main topic. Demote secondary H1s to H2.

### Code fix

Before:

```
<h1>Main Title</h1>
<h1>Secondary Title</h1>
```

After:

```
<h1>Main Title</h1>
<h2>Secondary Title</h2>
```

Medium Links Priority 53/100 Easy (~15m)

## External links safe

1 external \_blank links missing rel=noopener.

### Generic best practice

Add rel="noopener noreferrer" to target="\_blank" links. Without noopener, the linked page can manipulate your window object — security + perf risk.

### Code fix

Before:

```
<a href="https://other.com" target="_blank">External</a>
```

After:

```
<a href="https://other.com" target="_blank" rel="noopener noreferrer">External</a>
```

Medium Content Priority 53/100 Medium (~45m)

## Readable prose

Flesch reading ease -12.1 — very difficult.

### Generic best practice

Simplify your prose. Shorter sentences (15-20 words), smaller words (1-2 syllables), more paragraph breaks. Target 8th-grade reading level for a general audience.

Medium Geo Priority 48/100 Medium (~45m)

### Content provides clear answers

Moderate (5/10).

#### Generic best practice

Lead each section with a direct, citable answer to the question users would ask. AI engines (ChatGPT, Perplexity) cite the clearest, most specific sentences.

Medium Geo Priority 48/100 Medium (~45m)

### High factual density

Moderate (5/10).

#### Generic best practice

Add concrete facts — numbers, dates, percentages, named sources. Vague prose doesn't get cited; specific data does.

Medium Geo Priority 48/100 Medium (~45m)

### Structured for AI extraction

Moderate (5/10).

#### Generic best practice

Add bulleted lists, sub-headings, definitions, and TL;DR sections. AI engines prefer clearly structured content for extraction.

Medium Geo Priority 48/100 Medium (~45m)

### Cites authoritative sources

Moderate (5/10).

#### Generic best practice

Cite authoritative external sources (links, references). Pages that cite reputable sources are themselves cited more often.

Medium Headings Priority 45/100 Easy (~15m)

### Heading hierarchy

Heading levels skipped 2 times.

#### Generic best practice

Headings should descend logically: H1 → H2 → H3, no jumps. Skipping levels (H1 → H3) breaks accessibility tools and confuses crawlers.

#### Code fix

Before:

```
<h1>Page Title</h1>
<h3>Section</h3> <!-- skipped H2 -->
```

After:

```
<h1>Page Title</h1>
<h2>Section</h2>
<h3>Subsection</h3>
```

## Low (2)

Low Technical Priority 52/100 Medium (~45m)

### Response time acceptable

Fetches in 2086 ms — acceptable but slow.

#### Generic best practice

Server is slow. Investigate: enable a CDN, add page caching, optimise database queries, upgrade hosting. TTFB > 800ms hurts every Core Web Vital.

Low Images Priority 49/100 Medium (~45m)

## Modern image formats

9/10 images use modern formats.

## Generic best practice

Convert images to WebP or AVIF — typically 25-50% smaller than JPEG/PNG with no visible quality loss. Use <picture> for fallback.

## Code fix

Before:

```

```

After:

```
<picture>
  <source type="image/avif" srcset="photo.avif">
  <source type="image/webp" srcset="photo.webp">
  
</picture>
```
